Dear Sir,

**RE: Use of GK-GermKiller® Range of Products by Military Personnel.**

In view for your consideration to maintain cleanliness and personal hygiene for Military Personnel, we would like to propose the use of our *GK-GermKiller® Range of Premium Water-based Disinfectants*, namely:

- GK Surface™ – To be used as Surface Disinfectant for all surfaces, including helmets, fabrics and etc.
- GK Concentrate™ – To be diluted and used for surface disinfecting, soaking of boots and laundry
- GK Hand Sanitiser™ - To be used as alcohol-free sanitizer for germ-free hands.

Maintaining good personal hygiene is important in military setting as military personnel live and work closely together in performing their duties as soldiers. Keeping the environment and personal belongings such as helmets, uniforms, fieldpacks clean and germ-free can help prevent the spread of many infectious diseases related to respiratory, gastrointestinal and skin disorders. As such, the use of effective disinfectant cleaner, such as *GK-GermKiller® disinfectants*, helps ensure cleaning procedures are thorough and effective.

All GK-GermKiller® products **do not contain any known hazardous substances** and are **safe for daily use** as non-toxic disinfectants for their intended applications. As a result of extensive research, development and testing with the sole focus on two objectives: **Effectiveness** and **Safety**, *GK-GermKiller®* proprietary formulations are highly effective and have had a long history of safe use. *GK-GermKiller®* is supported by US-based laboratory test reports and earned the trust of many customers, such as Parkway Pantai group of hospitals, international hotels and leading airlines in Singapore.

The active ingredients in *GK-GermKiller®* products, Quaternary Ammonium Compounds (Quats), are widely recognised as sanitising agents for their non-toxic, odourless, colourless, non-corrosive characteristics. Quats are compounds that have nearly 100 years of safe use and are well-studied and understood. **Quats are permitted for use by the US Food and Drug Administration for food contact at defined concentrations.** The Quats used in *GK-GermKiller®* products are produced exclusively by Lonza, one of the leading global life science and pharmaceutical companies. Lonza has the broadest portfolio in the industry that offers biocides for various applications globally and most of their Quats formulas are USA EPA-registered.

To understand more on the safety aspects of our GK-GermKiller® products, we have prepared a brief summary of the extensive research that we have conducted in developing our dedicated formulations to protect our users. Please refer to the file named "Quats in GK-GermKiller-180404" for more details.

We look forward to address any concerns that you may wish to clarify. Please kindly contact me on my mobile, 9383 1607 for more clarifications.

Thank you for your attention.

Yours Sincerely,

Lim Swee Cheng  
Sales Manager
